Art Unit: 3676

## AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A cylinder lock (1) and key (2) combination, comprising

- a cylinder shell (140),
- a key plug (130) which is rotatably mounted in said shell,
- a longitudinal key slot (100) extending along said key plug in parallel to the rotational axis thereof for receiving a key blade (200) having, at a side surface (201) thereof, a longitudinally extending groove (202) with a side wall (203) forming a longitudinally extending coded surface (203),
- at least one locking tumbler assembly (110) having a body segment (113) with a contact portion (115) reaching into said key slot so as to engage with said coded surface (203) of a properly shaped key blade being inserted into said key slot, and
- at least one cavity (120) located at a transversal side of said key slot (100) in said key plug (130), said cavity accommodating an associated one of said at least one tumbler assembly and guiding the latter for elevational movement therein,
- said at least one locking tumbler assembly (110) comprising a pair of adjacent tumbler body segments (113, 114) accommodated in the same cavity, and
- each tumbler body segment (113, 114) having an associated contact portion (115, 116) reaching into said key slot (100),

characterised in that

Application S.N. 10/500,729 Attorney Docket: 0091-0239PUS1 Amendment dated January 19, 2006

Office Action dated August 2, 2005

Art Unit: 3676

Page 7 of 20

- said adjacent tumbler body segments (113, 114) in said pair are not connected to

each other and are elevationally movable independently of each other in said cavity

so as to be individually displaced into respective elevational positions, and

- said associated contact portions (115, 116) in said pair are axially separated in the

longitudinal direction of the key plug such that these contact portions are located at a

longitudinal distance from each other and will be positioned at elevationally specific

and generally different levels when being engaged by said coded surface (203) upon

insertion of said key blade (200) into said key slot (100)

- whereby the tumbler body segments (113, 114) in each pair are displaceable into a

number of different positions relative to each other representing different codes.

2. (Previously Presented) A cylinder lock and key combination as defined in

claim 1, wherein each segment in said pair of adjacent tumbler body segments (113,

114) is guided in a respective portion of said cavity (120).

3. (Previously Presented) A cylinder lock and key combination as defined in

claim 2, wherein said pair of adjacent tumbler body segments (113, 114) have

supplementary cross-sections, which together substantially correspond to the cross-

section of said cavity (120).

Application S.N. 10/500,729 Attorney Docket: 0091-0239PUS1 Amendment dated January 19, 2006 Art Unit: 3676

Office Action dated August 2, 2005

Page 8 of 20

4. (Previously Presented) A cylinder lock and key combination as defined in

claim 3, wherein said adjacent tumbler body segments (113, 114) of said pair are

partially defined by part-cylindrical surface portions being guided by wall portions

defining said cavity (120).

5. (Currently Amended) A cylinder lock and key combination as defined in

claim 3, wherein said adjacent tumbler body portions of said pair have mutually

engaging surface portions segments (113a, 114a) being in sliding engagement with

each other.

6. (Previously Presented) A cylinder lock and key combination as defined in

claim 5, wherein said mutually engaging surface portions (113a, 114a) are

substantially planar.

7. (Previously Presented) A cylinder lock and key combination as defined in

claim 1, wherein said key plug (130) contains a row of cavities (120), at least one of

which accommodating a pair of adjacent tumbler body segments (113, 114).

8. (Previously Presented) A cylinder lock and key combination as defined in

claim 1, wherein said key plug (130) includes at least one locking tumbler assembly

(113,114) on each transversal side of said key slot (100).

Application S.N. 10/500,729 Attorney Docket: 0091-0239PUS1 Amendment dated January 19, 2006 Art Unit: 3676

Office Action dated August 2, 2005

Page 9 of 20

9. (Previously Presented) A cylinder lock and key combination as defined in

claim 1, wherein said pair of adjacent tumbler body segments (113, 114) cooperate

with a side bar (150) being accommodated in a longitudinal recess (151) in said

cylinder shell (140), said side bar (150) being adapted to normally lock the key plug

against rotation in said shell and to be displaceable into a releasing position upon

insertion of a properly coded key blade (200) into said key slot (100).

10. (Previously Presented) A cylinder lock and key combination as defined in

claim 1, wherein said contact portions of said tumbler body segments (113,114) are

constituted by outwardly projecting fingers (115,116).

11. (Previously Presented) A cylinder lock and key combination as defined in

claim 10, wherein said fingers (115, 116) are positively guided in said longitudinally

extending groove (202) upon insertion of said key blade into said key slot.

12. (Currently Amended) A cylinder lock (1) as defined in claim 1 having at

least one pair of independently movable tumbler body segments (113,114)

accommodated in a cavity (120) in a key plug (130) forming part of a cylinder lock in

a lock and key combination as defined in claim 1.

13. (Currently Amended) A key blade (200) as defined in claim 1 having, at a

side surface (201) thereof, a longitudinally extending groove (202) with a side wall

Application S.N. 10/500,729

Amendment dated January 19, 2006

(203) forming a longitudinally extending coded surface (203) with at least one pair of

neighbouring code surface portions (204, 205) located at elevationally specific and

generally different levels for co-operation with the respective contact portions of a

pair of adjacent tumbler body segments of a lock as defined in claim 12.

14. (Previously Presented) A key blade as defined in claim 13, wherein said

longitudinally extending groove (202) positively guides said respective contact

portions, constituted by outwardly projecting fingers, when the key blade is inserted

into a lock.

15. (Previously Presented) A key blade as defined in claim 13, wherein said

key blade (200) is symmetrical with longitudinal coded surfaces on each side thereof.

16. (Previously Presented) A key blade as defined in claim 13, wherein said

coded surface (203) comprises a longitudinal row of pairs (204, 205) of neighbouring

code surface portions.

17. (Currently Amended) A key blank for producing a key blade as defined in

claim 13, said key blade having, at a side surface thereof, a longitudinally extending

coded surface (203), said coded surface (203) being cut out from at least one material

portion at the side of the key blade and having a pair of neighbouring code surface

portions (204,205) for cooperation with the respective contact portions of a pair of

adjacent tumbler segments in the cylinder lock a lock as defined in claim 12.
